*Are you getting enough sleep?
Don't let reflux stop your sleep
Prevent reflux in your child*

Are you concerned because your child vomits and spits a lot and she or he is not growing well?

Are you concerned that your infant baby started coughing, choking and suddenly stopped breathing during or after feeding?

Have you noted that your baby has nasal congestion frequently?

Do you know that reflux and vomiting is extremely common during the first year of life and 60% of them have reflux during the first 6-months of life. These numbers increase significantly, up to 85% in more delicate babies as premature infants, according to **PEDIATRICS**, a prestigious medical journal.

This fragile population could be at a higher risk of severe reflux and medication side effects that increase the risk for complications during this first year of life.

Learning proper feeding techniques will improve reflux in your baby.

Your child could be having GERD now.

Prevent and improve reflux at its best by integrating tools of educational technology from an expert in this field to best deliver the proper education.

We focus on the most important issues in feeding and gastro-esophageal reflux by integrating state-of-the-art lectures, and expert opinion from a Pediatric Gastroenterologist. Thought-leaders and visionaries on practical answers to the most pressing questions regarding reflux management of patients with gastro-esophageal reflux disease.

Please visit www.noreflux.org to begin your educational journey and help your child
